

Report on CASPA New Energy SIG 2/24/10

“Smart Semiconductor Opportunity”

Qing Li

February 24 (Palo Alto) -- CASPA's New Energy SIG hosted its first public event – a seminar on Smart Grid and Smart Home titled “Smart Semiconductor Opportunity” – at WSGR's headquarter in Palo Alto. Around 30 people attended the seminar, during which Dr. Michael Hsieh and Dr. Charlie Chao gave presentations on “Introduction on Smart Grid and Smart Home” and “IC Applications of Smart Grid and Smart Home” respectively. Both presentations were well received with a lively Q&A session towards the end.

Before the main presentations, Jason Wang, CASPA's Chairman and President, gave a brief overview of CASPA, and Sean Yan, CASPA's Director and co-leader of the New Energy SIG, introduced the mission and objectives of the SIG. Tonight's seminar is one of the many events to be hosted by the SIG in the coming year. Future events include seminars, symposiums, technology exchanges with China, and joint project and venture opportunities with China.
